

Figure 1. Project Outcomes Expressed as Logic Model

Situation: Significant gaps exist in knowledge, skills, policy and practice related to the use of augmentative and alternative communication systems (AAC) that prevent individuals with dementia from having equal access to opportunities for health, function and participation.

Priorities: To evaluate the effectiveness of a research utilization program involving the implementation of best practices related to the use of AAC for persons with dementia that is based on research outcomes of a current NIDRR Field Initiated Research project.
